## Profile

Trainee Software Developer with robust knowledge of the fundamentals of programming and a strong interest in learning advanced concepts and technologies. I particularly enjoy the problem-solving aspects of programming and have an eye for detail.

## Skills

- Core JavaScript knowledge
- Fundamentals of Python
- Use of Node.js (with Express) for REST APIs with MongoDB
- Worked with React to create single-page web apps powered by Node backend
- HTML/CSS using frameworks like Bootstrap/Tailwind/Material UI
- Object-oriented programming (OOP)
- Test Driven Development
- Version control (git and GitHub)
- Excellent troubleshooting skills
- Good communication skills
- Agile methodologies (Stand-ups, etc)
- Pair programming

## Recent Experience

**2022 - Present**      **Trainee Software Developer**      **The Developer Academy Sheffield**

- Currently undertaking a Full-Time Web Development Bootcamp with The Developer Academy
- Worked on a number of projects both individually and in pairs/groups
- Gained knowledge and experience in: HTML/CSS, JavaScript, Node.js, Git

**2020 - 2021**      **Student Ambassador**      **Unite Students**

- Ensuring rooms were fit for check-in via inspections, stocking rooms and undertaking maintenance requests
- Filling in at the reception desk to manage and deliver the large flow of parcels at the various accommodations.
- Assisting the large influx of new students on the initial check-in weekend

## Selected Projects

[Personal Portfolio Website](#)

*Deployed* <https://jord2097.github.io/portfolio/>

*GitHub* – <https://github.com/jord2097/portfolio>

This portfolio serves as a complete collection of all my projects.

### Full-Stack Events App

*Deployed* – <https://jord2097.github.io/memories-frontend/>

*GitHub* – <https://github.com/jord2097/memories-frontend/>

<https://github.com/jord2097/events-backend>

This project involved creating a backend API as well as the React frontend. The API was produced using Node.js/Express and was connected to a MongoDB database. It features basic CRUD operations, authorization for editing privileges and search functions. The React frontend allows all viewers to browse and search the page, but they must first register and login to add/edit posts. The frontend uses Material UI (Core) which helped to improve UI/UX. Produced as a pair.

### React Weather App

*Deployed* – <https://jord2097.github.io/weather-app-deluxe/>

*GitHub* – <https://github.com/jord2097/weather-app-deluxe/>

Weather web app built using React with utilization of a forecasting API and a geocoding API. Allows for users to input a desired location and receive 8 days of weather data, with detailed information for the current day. Produced as part of a pair.

### OOP Text Adventure Game

*Deployed* – <https://jord2097.github.io/oopgame/>

*GitHub* – <https://github.com/jord2097/oopgame/>

JavaScript-based OOP game which features navigation between rooms, random enemy spawning, and a basic combat system. Produced individually.

## **Education**

**2018 - 2021**

**Sheffield Hallam University - BSc in Biochemistry (2:1)**

- Modules in Cell Biology, Biochemistry, Medicinal/Organic Chemistry and Analytical Chemistry
- Weekly Lab Projects using analytical instruments, methodologies like qPCR and Organic Synthesis
- Research Project in Bioinformatics, testing and evaluating Linux command-line quality control software for next-generation DNA sequencing
